

Maximising asset efficiency in the power generation business is always a key aim and often, the ability to reapply surplus energy equipment can improve overall earnings. Naples Associates Inc from the USA has been in the business of providing equipment for surplus energy recycling for more than 30 years.

Energy Capital participates actively in the **surplus energy equipment business** with a strong partner in **Naples Associates Inc (USA).**

- ▶ Reapplication of surplus energy equipment is good for the environment and is financially viable
- ▶ Naples Associates Inc has more than 30 years of experience in handling surplus energy equipment
- ▶ Energy Capital in association with Naples is able to purchase, refurbish and resell industrial gas turbines
- ▶ In addition to equipment, Energy Capital provides the auxiliary equipment and technical knowhow to ensure proper operation and maintenance

Together with Naples, Energy Capital buys and retrofits industrial gas turbines, buys and sells surplus power generation equipment, and purchases power plants for reapplication after overhaul. Typical equipment bought and sold include frame size 3002, 5001, 5002, 6001, 7001 and 9001, and Westinghouse series 191, 251 and 501 systems.

With the power generation equipment and mechanical drive turbines we sell, we include all the auxiliary equipment necessary to maintain operation. Energy Capital can provide technical direction, spare parts as well as the application skill for all equipment offered. We offer reapplication of power generation equipment at very attractive terms on a dollars/kW or dollars/hp basis.

With Naples as an active partner, Energy Capital is able to work directly with firms that require marketing assistance with the sale of surplus energy equipment, anywhere across the globe.
